NOTE

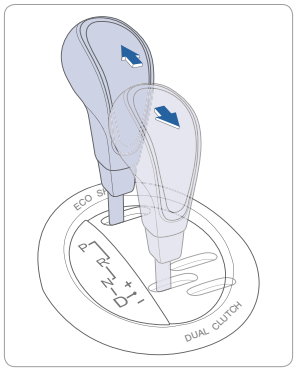
To operate your iPod® through the vehicle's audio system, connect your Apple supplied USB cable to the USB port.

TRANSMISSIONS

EcoShift Dual Clutch Transmission

EcoShift Dual Clutch Transmission technology provides automatic shifting and excellent fuel economy based on manual transmission efficiency.

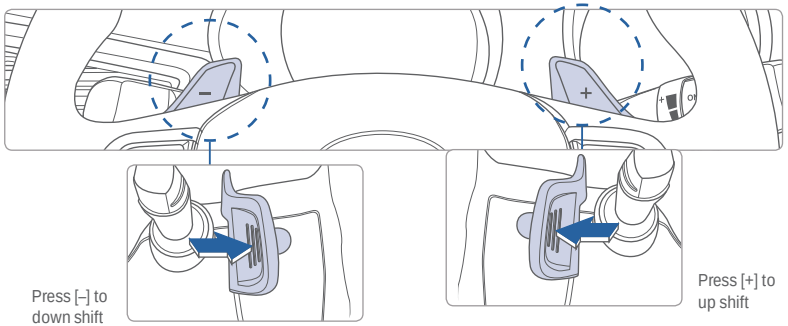


(➡) : Depress the brake pedal when shifting.

(⇨) : The shift lever can be shifted freely.

P : Park
R : Reverse
N : Neutral
D : Drive
Ds : Sport Mode
[+] : Shiftronic Upshift
[–] : Shiftronic Downshift

Paddle shifters



The paddle shifters operate when the shift lever is in the D position or the Sport Mode.

- When you pull the [+] or [–] paddle shifter once, the system changes from automatic mode to Shiftronic.
- When paddle shifters are no longer used the system changes back to automatic mode.

NOTE

If you pull the [+] and [–] paddle shifters at the same time, the transmission will not change gears.

NOTE - EcoShift Dual Clutch Transmission characteristics

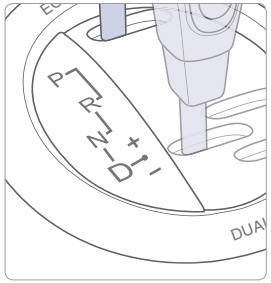
The new technology of the ECOShift Dual Clutch Transmission is different than a traditional automatic or manual transmission:

- The EcoShift Dual Clutch Transmission is an automatically shifting manual transmission.
- EcoShift Dual Clutch Transmission utilizes two clutches connected to a computer-controlled manual gearbox. It provides the convenience of a transmission that shifts automatically, with the efficiency of a manual transmission.
- When you turn the ignition on and off, you may hear clicking sounds as the transmission solenoids turn on and off, cycling through a self test. This is a normal sound for the EcoShift Dual Clutch Transmission.
- When you stop on a hill, if you remove your foot from the brake pedal, the vehicle will remain stationary for approximately two seconds to prevent the vehicle from rolling backwards. If you depress the accelerator pedal during the two second interval, the vehicle will accelerate. If you wait more than two seconds, the vehicle will enter creep mode and may roll backwards if the hill is steep.

Caution

- You should always use the foot brake to hold the car on a hill until you are ready to drive. Using creep mode to hold the car on a hill may damage the clutch.
- An overload of the clutch is indicated by a shudder or vibration and a blinking warning light. To prevent clutch damage, the clutch will release. If the clutch is released, apply the foot brake and wait a few of minutes before driving. Ignoring these warnings and wait time can lead to transmission damage.

Sport Mode

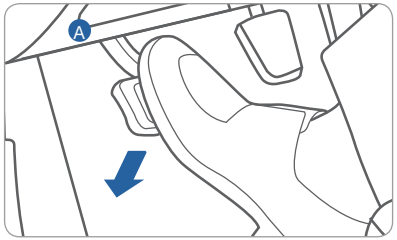


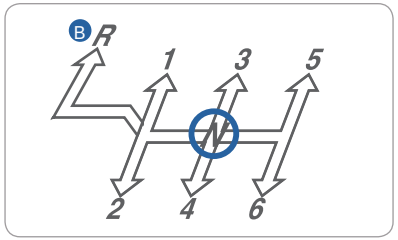
Shift lever from D to DS to activate Sport mode.

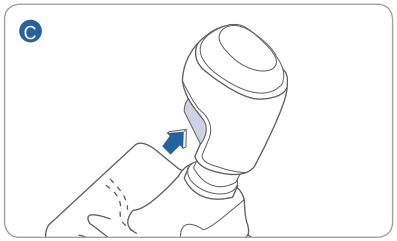
Sport mode is a recalibrated automatic mode that will hold gears longer and downshift at higher RPM for a more dynamic driving style.

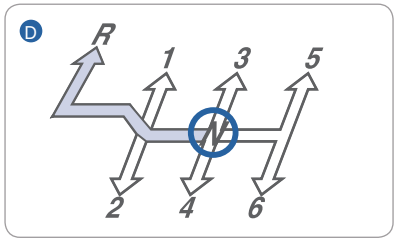
If you use the paddle shifters (or [+] or [-]) to enter the Shiftronic mode, you will stay in Shiftronic mode until the shift lever is returned to Drive, giving you full manual control.

Manual Transmission





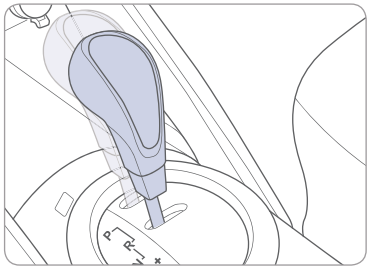




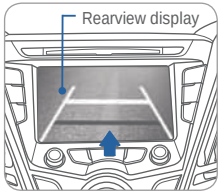
Shifting into Reverse

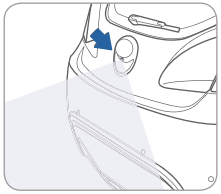
1. Fully depress the clutch (A)
2. Shift into Neutral (B)
3. Pull the Shift Lever Knob (C)
4. Shift into Reverse (D)

REARVIEW CAMERA

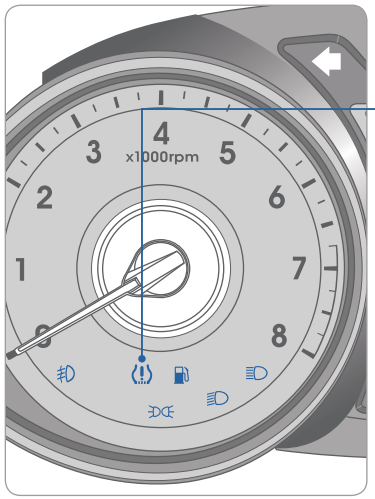


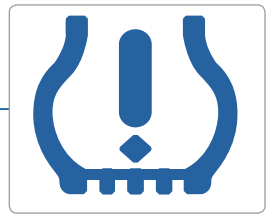
The rearview camera will activate when the ignition switch is ON and the shift lever is in the R (Reverse) position.





TIRE PRESSURE MONITORING SYSTEM (TPMS)





Low tire pressure indicator / TPMS malfunction indicator

Low Tire Pressure Indicator

Illuminates if one or more of your tires is significantly under-inflated.

TPMS Malfunction Indicator

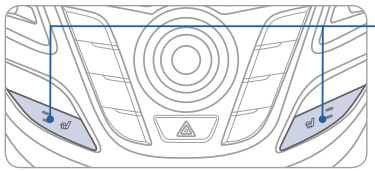
Blinks for approximately one minute then remains illuminated when there is a malfunction with the TPMS system. Have the system checked by an authorized Hyundai dealer.

CLOCK ADJUSTMENT

Time Setup

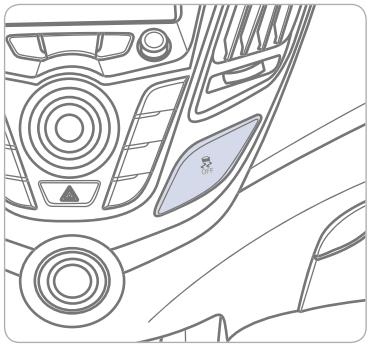
1. Press and hold CLOCK Ⓐ.
2. Touch ▲ or ▼ to set the clock.
3. Touch “Done” when finished.

SEAT WARMER



Push desired switch to warm the seat.

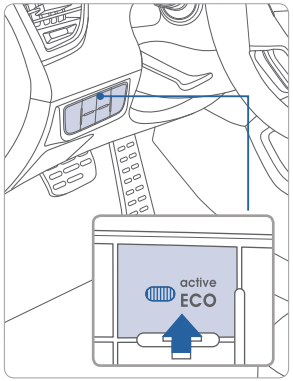
ELECTRONIC STABILITY CONTROL (ESC)



The ESC system is an electronic system designed to help the driver maintain vehicle control under adverse conditions.

Press OFF to turn ESC on or off.

ACTIVE ECO SYSTEM



Active ECO System helps improve fuel efficiency by controlling the engine and transmission.

Active ECO on - For optimal fuel efficiency

Active ECO off - For optimal performance and drivability.

To improve your fuel efficiency:

- Accelerate at a moderate rate
- Keep tires inflated to the recommended pressure on the placard
- Be sure the wheels are properly aligned
- Avoid unnecessary braking
- Drive between 55-65 mph on the freeway
